Windsor Manlift Ticket

Windsor Manlift Ticket - The Elevated Platforms and Manlifts Certification course helps to provide the required training on the work practices, safe operating procedures, rules and regulations regarding the daily activities for the operators of this machine. The program has been designed for individuals who are actively involved in these activities or those who have a basic understanding of this equipment.

In the past couple of decades, manlifts and aerial platforms have become a common sight in industrial maintenance applications and on construction job sites. These equipment provide an easy way to lift staff close to what should be performed on a stable platform apparatus, enabling workers to perform tasks with greater safety and comfort rather than being perched on top of ladders or scaffoldings.

Similar to every other device, manlifts are just safe if they are utilized properly. Since they elevate staff above ground level or floor, accidents can easily happen and this can result in serious death or injuries for both the operators of the manlift as well as any passerby who may not be lucky enough to be standing below.

There are various kinds of manlifts. Nearly all fall into 1 of 2 categories: the articulating boom lift, which has the capability of both horizontal and vertical movement and the scissors lift, which is capable of moving up and down.
