Windsor Aerial Lift Train the Trainer

Windsor Aerial Lift Train the Trainer - The Aerial Lifts Train the Trainer Certification Program would teach trainers how to effectively train operators in safe industrial mobile machinery operation. Trainers are given in-depth instruction on aerial lift machinery. The program is provided on an open enrollment basis and delivered at selected training locations. Before the certification, trainers are evaluated and scored on their demonstrated skills and knowledge.

The Aerial Lifts Train the Trainer Certification Program emphasizes practical learning. As the best training provider in the business, we offer the best hands-on training possible through opportunities to practice techniques and concepts taught within the classroom. In addition to hands-on experience, trainers develop general knowledge of instructional techniques and machine theory, field and classroom communication skills, and ability to effectively train and evaluate operators. Trainers will gain knowledge of what traits make a successful trainer.

The Aerial Lifts Train the Trainer Program also teaches the proper methods necessary to express the correct information in the classroom and field setting. There are three factors of equipment operation which the trainer should learn how to convey to operators: what to carry out; how to do it; and why it should be carried out.

In the program, trainers would be given the detailed, latest reference material to better help them convey the information to machine operators. The guidebooks utilized, include detailed information on all aspects of industrial mobile equipment operator training. Incorporated in the package are training aids which provide a visual reference so as to enhance the learning experience. The equipment-specific training products include essential materials meant for both the operator and the trainer: videos/DVD's, overhead transparencies, kinds of equipment, safety message posters; stability pyramids and digital training aids.
