

Windsor Telehandler Training Courses

Windsor Telehandler Training Courses - The employer has the responsibility to make certain that their staff are trained to work proficiently making use of telehandler machines. The personnel need to be assessed for their ability to use the machinery. If deficiencies are found, employers should provide training so that workers get the required level of skill. The level of responsibility of the person should be considered when training is provided. Effective training would solve any deficiencies in the knowledge, skills and understanding of telehandler operators and supervisors. Training could be undertaken through in-house session or by engaging the services of an external training provider. An assessment upon completing the training period will determine whether or not the learning goals have been met.

Regulations and guidelines for the basic telehandler operator testing and training are set by local, federal and state/provincial regulators. Basic training does not deal with such subject matters as the lifting of suspended loads, the lifting of persons, the operation of rotating machinery or using various attachments. Further training will have to be undertaken if such tasks are required on the work location.

Maintenance and Inspection

Like whatever machinery, a telehandler needs effective maintenance. The machinery inevitably will suffer wear over time. Right maintenance is important to ensuring safe utilization of the telehandler machinery. Checks and inspections are important to ongoing maintenance procedures. Operators should have machine-specific training in order to prevent, rectify and monitor problems associated with damage, wear and deterioration. Personnel require competence and experience in both periodic and breakdown maintenance. The preventive maintenance instructions of the manufacturer must be seriously viewed and complied with, taking into consideration such factors as environmental circumstances in the work setting and frequency of use.

The user of the machine along with the owner of the machine share the responsibility for ensuring that the telehandler is in full working condition. General maintenance is usually carried out by the telehandler owner whilst pre-use checks are normally performed by the user.
